

Eight people. Every face visible.

Three position maps for your camera session. No app or upload needed.

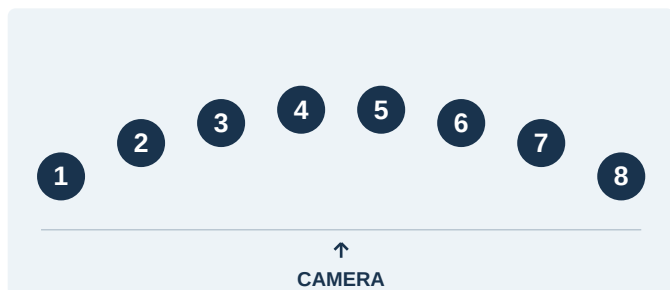

Four seated, four standing

4 FRONT + 4 BACK

Seat four people on stable chairs, with four standing behind. Stagger the back row into the gaps instead of hiding one face behind another. Keep the rows close enough to share the light, then check all eight faces through the camera.

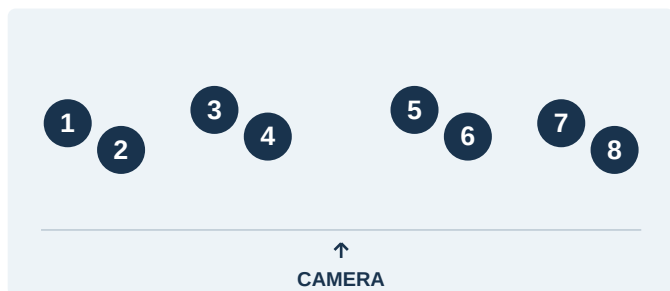

A shallow arc of eight

8 IN ONE ROW

Stand in a gentle curve, all facing the camera. Keep the curve shallow so the outer people are not far in front of the centre. Leave space at both edges and take a test photo before choosing the final crop.

Four relaxed pairs

2 + 2 + 2 + 2

Arrange four pairs across the frame, with a little space between pairs. Ask everyone to turn slightly inward and keep faces visible. Use comfortable gestures that each person agrees to; a pair can be friends, relatives or teammates.

Before the shutter

- ☐ Ask permission to photograph and share. Let everyone choose a comfortable position.
- ☐ Use a level, accessible spot and stable chairs. No climbing or balancing on furniture.
- ☐ Centre the camera. Check all eight faces, closed eyes, frame edges and cropped feet.
- ☐ Take a test photo and inspect it before the final shot.

Numbers mark positions, not height, age or importance. These maps are not AI results.

Optional app image generation is separate and uses paid tokens. Premium is optional and auto-renewing. Check current in-app prices and terms before buying.
